## ROTAX ACE™ 4-STROKE ENGINES

With the Advanced Combustion Efficiency (ACE) family of engines, BRP engineers optimized the combustion system, reduced mechanical friction, and freed intake and exhaust breathing. The result is the most efficient engines in snowmobiling. Not only are they efficient, they're a pleasure to operate and own. ## INTELLIGENT THROTTLE CONTROL

Standard on the ACE engines, the iTC™ system delivers a whole different snowmobiling experience.

- **Driving Modes:** A button on the console enables you to select one of three driving modes. Standard mode ensures a smooth start and linear acceleration; Sport enables full performance and quicker acceleration; ECO® limits top speed and acceleration rates for a more relaxed, fuel-conserving ride.
- **Finger Throttle** (only on 600 ACE and 900 ACE engines without Turbo): The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

<sup>1</sup> Observed metric horsepower based on internal dyno test performed in optimal conditions.

<sup>2</sup> Data based on internal engineering trail testing.

<sup>3</sup> Data based on internal engineering trail testing in ECO mode.

<sup>4</sup> Based on retail sales results as of December 31, 2019.

**Experience the advantage of XPS.** Oil and care products engineered to extend the life of your ride, tested in the world's harshest conditions, and designed to optimize your vehicle's performance. Learn more at [XPSlubricants.com](http://XPSlubricants.com)

FLOTATION ASSISTANCE

HIGH AIRFLOW

Our proprietary ExoFloat System features an exoskeleton that is fully body mapped with hi-tech flotation panels that help assist you in case of a fall. It also has mesh panels at the bottom to evacuate water. For optimal performance, wear the Stamina Float jacket and Stamina pants together.

**eLinQ**  
SYSTEM

**EXO**  
**FLOAT**  
SYSTEM
**KEY TECHNOLOGIES****SELF LEVELING**

Strategically placed Exofloat panels help assist you in self leveling to the surface

**EXIT ASSIST**

Mesh drainage to ensure you are not weighed down by the water that can inhibit exit

**FLOAT ASSIST**

For more than 30 minutes (\*rider must exit within this timeframe to avoid hypothermia)

This is not a coast guard approved personal flotation device, this is a flotation assistance technology. We do not recommend riders to drive over unsafe frozen bodies of water.

# SYMPATEX KEY TECHNOLOGIES

## PERFORMANCE

### Re>Think Performance - Dynamic Breathability

In contrast to other membrane technologies, the poreless compact Sympatex membrane is based on a physical and chemical principle. The water-attracting (hydrophilic) part of the membrane absorbs the moisture from the body and emits it to the outside by evaporation. The water vapour molecules are transported outwards along the hydrophilic molecular chains. The molecular structure (hydrophilic components) of the Sympatex membrane swells in moisture and therefore provides space for water vapour transport and fast evaporation.

**Enjoying the winter is often just a matter of dressing up. We at Lynx are pioneers in equipping the riders for demanding Nordic conditions.**

## GEARING UP FOR THE RIDE

**"There's no bad day, if you're geared up right!"**

Some people may think that cold weather or lack of daylight is a reason to postpone your ride, but that's not actually true. It's all about gearing up right. Cold is not actually cold if you have right layers.

What I like to have is merino layers, thermo layers and sometimes even fleece, but I never go out without a protection. If you protect your head, remember to also protect your body.

**Now that I'm all geared up, I'm ready to ride!**

## ELINQ

As snowmobilers, we love the freedom our sleds bring us. It's addictive. And that's why we continue to add ways to find more of it in every ride.

eLinQ is an innovative solution that connects your heated gear and accessories to your snowmobile without adding more corded connections.

eLinQ combines your Lynx DESS tether into both a tether and a 12-volt accessory connection in one cord. A magnetic connector mounts to the sled next to the DESS post to provide the electric connection necessary to power any 12-volt accessory like heated shields, gloves, boots, and more.

## FIDLOCK SYSTEM

**FIDLOCK helmet buckles** combine safety with single-handed use and comfort, even with gloves, for innovative head protection. The magnetic, automatic closing mechanism makes fastening a helmet as easy as possible for users. The single handed use allows our helmet buckles for sports, work and other activities to be opened quickly and intuitively.

## HOW TO CHOOSE LENS COLORS?

On brighter days, a darker or mirror lens will help to protect your eyes more from the harsh reflections of the sun on the snow. Flat light conditions require a lens that will allow more light through so you can use all the available light to your advantage. Medium tint lenses are made to be adaptable to a variety of

conditions. Lightly tinted lenses allows as much light in as possible and provides you with enhanced contrast throughout those darker days and snowfall. Clear lenses also for snowfall and dark conditions.

**All Radian lenses are UV (UVA/UVB) protected.**
